

## Impaticized PowerPoint in Your SLN Online Course

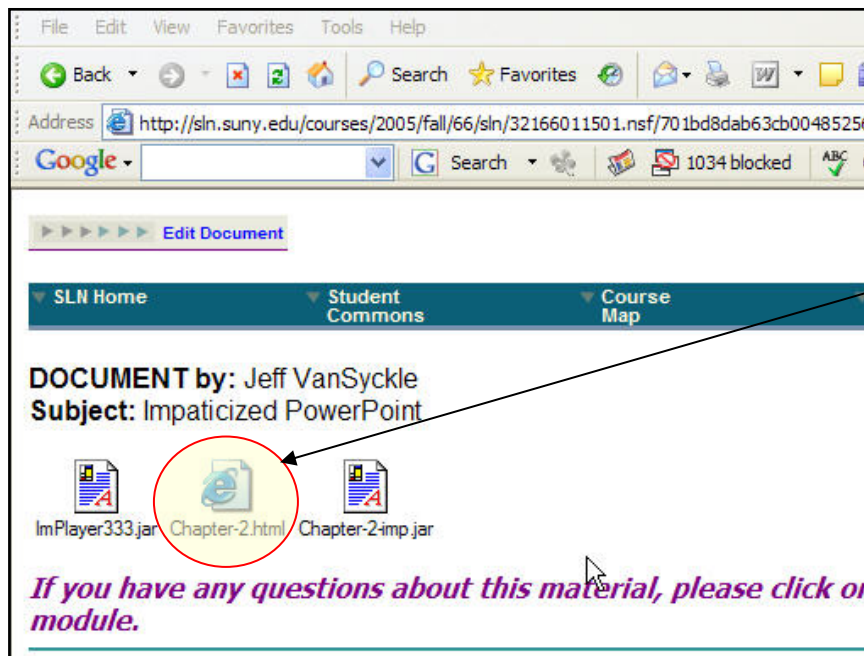

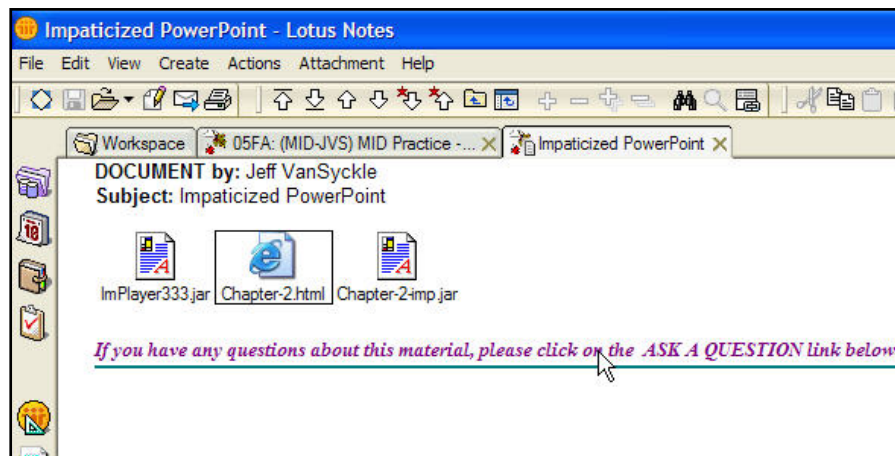

Attach all three files that are created when you Impaticize a PowerPoint:

1. The "Impaticized" file (with an \*.imp extension)
2. The HTML Document
3. An Impatica Player file. (\*.jar extension)
4. If video was used in the presentation, an Impatica Video file will be created.

**Then students must be instructed to click on the \*.html file** (the other two are visible attachments, but are actually playing in the background in order for the html file to work on the web).

The three files can be likened to a DVD player, a monitor, and the DVD. Your PowerPoint is the DVD; the ImPlayer file is the DVD player; and the -imp.jar file is the monitor.

- This is what you will see in Lotus Notes after attaching the files created in Impatica to the lecture document.

- This is the same document as the student will see it on the web. You must direct them to click on the HTML document to view the PowerPoint.
